## UNIT VENTILATOR

**Combines Beauty and Simplicity  
with Ideal Performance**

**I**DEAL performance, beauty and simplicity are the dominating features of the Sturtevant Unit Ventilator — a complete compact unit designed and built principally for heating and ventilating schoolrooms, offices and the like.

The apparatus consists of motor driven fans which force outdoor air over steam radiators into the room. Standard sizes deliver 600, 900, 1200, and 1500 C. F. M. Provision is made for filtering and controlling the temperature of discharged air. Temperature rise is from 0 to 108° F.

The casings are about the size of an ordinary direct radiator and are attractively finished in olive green, but can be furnished in other colors to harmonize with any room. The paneled front and the polished cove around the base, together with the nickel plated outlet grill, are features not found in any other equipment of this type now on the market.

The Sturtevant Unit Ventilator has many advantages such as independent operation for every room, elimination of ducts and fan room, high efficiency and pleasing appearance. We will gladly send you a copy of our Catalog 334 which describes in detail the many fine features of the Sturtevant Unit Ventilator.
